### **DETAILED ACTION**

The amendment filed 12/28/2005 is acknowledged. Because of the current rejections of previously allowed subject matter, this Office action is non-final.

#### ***Claim Rejections - 35 USC § 102***

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 11-13 are rejected under 35 U.S.C. 102(e) as being anticipated by Adams (6,632,227). Adams discloses a method for obtaining a tissue sample essentially as claimed wherein inherently the overtube is rotatable with respect to the endoscope which resides in a separate lumen (Figure 4a and col. 4, line 3-col. 5, line 57).

#### ***Allowable Subject Matter***

Claims 1-10 are allowed.

Claim 14 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

**Conclusion**

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Burbank et al. (5,775,333) disclose an apparatus for automated biopsy and collection of soft tissue, but does not specifically disclose RF energy used for cutting.
